Pirate Escape Game - Version 2 - New Features, Changes and Bug Fixes

New Features:

- Split the game into 3 modes. Easy, Medium and Hard (more info below)
- Add more downgrades/upgrades (more info below)
- Change the score to be a formula using time played, gems collected and upgrades/downgrades collected. Example: Score = (time played x gems collected) - 20 points for all downgrades picked up + 20 points for all upgrades picked up.
- Can you make the gems bob/zoom in and out a bit? Basically give them a little animation to make them more visual and desirable.

Bug Fixes:

- Bug: Picking up the slow down ship downgrade says positive text, not negative
- I downloaded Unity and changed the device on Simulator mode. Depending on the device used, the walls and game borders aren't in the right position. See screenshot below. Game borders need to be on the edge of any screen used.
- Powerups can spawn overlapping the fort in the middle.
- I can't tell if the cannon speeds up it's rate of fire over time? But it should slowly. So after 1 minute on Easy, rather than every 5 seconds, it should be, say, every 4 seconds.

Other Changes:

- Make the Gems despawn if not picked up after a short time period (depending on difficulty level)
- Make the Powerups despawn if not picked up after a short time period (depending on difficulty level)
- Can you make the walls thinner as shown in the below photo? This will allow a) slightly bigger playing area and b) this means 4 more round walls the cannonballs can bounce off for more unpredictability, 1 in each corner.
- Can you use a different sound effect when the ship gets hit/you die - an explosion or similar, instead of the same as the cannon firing sound.
- Positive sound effect when picking up powerups, and negative when picking up downgrades. (But a different positive sound to picking up the gems currently used so it's not the same)
- Add a small firing animation effect in front of the cannons mouth when it fires each cannonball.

EASY

- Same game as the current version.
- Gems and powerups despawn after 4 seconds.
- Downgrades despawn after 4 seconds.

MEDIUM

- Game starts with 3 cannonballs fired in random directions between 1-2 seconds, instead of just 1.
- Cannon spins 50% faster.
- Gems and powerups despawn after 3 seconds, downgrades despawn after 5 seconds.
- Cannons rate of fire over time increases faster than Easy mode.

HARD

- Game starts with 5 cannonballs fired in random directions between 1-2 seconds, instead of just 1.
- Cannon spins 100% faster.
- Gems and powerups despawn after 2 seconds, downgrades despawn after 6 seconds.
- Cannons rate of fire over time increases faster than Normal mode.

- Make the first cannonball spawn much faster, after 1 second instead of 5 seconds (then the second cannonball can be after 6 seconds, then 11 etc. slowly speeding up - it's just too long of a wait at the start for the first cannonball)

Difficulties:

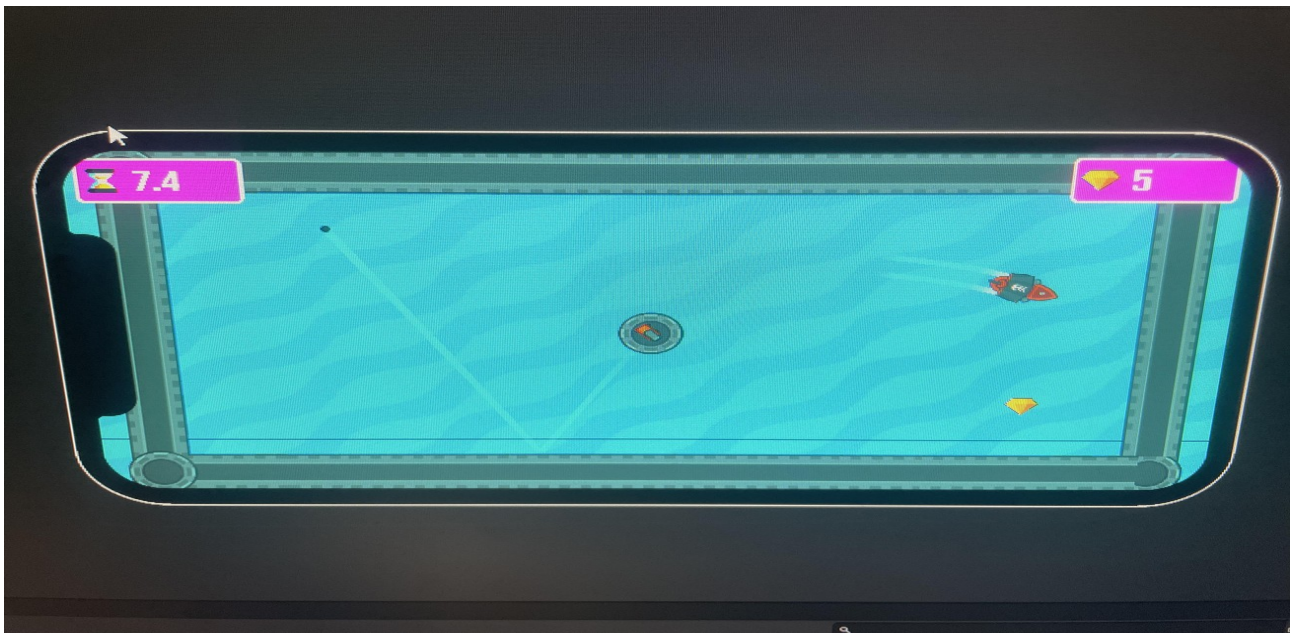

Powerups To Add:
1. Make ship smaller. Halves ship size for 10 seconds.

Downgrades To Add:
1. Make ship bigger. Doubles ship size for 10 seconds.
2. Speed up cannonballs. Makes all cannonballs 25% faster for 10 seconds.
3. No Gems. Disables all gems (and despawn current one) for 10 seconds.

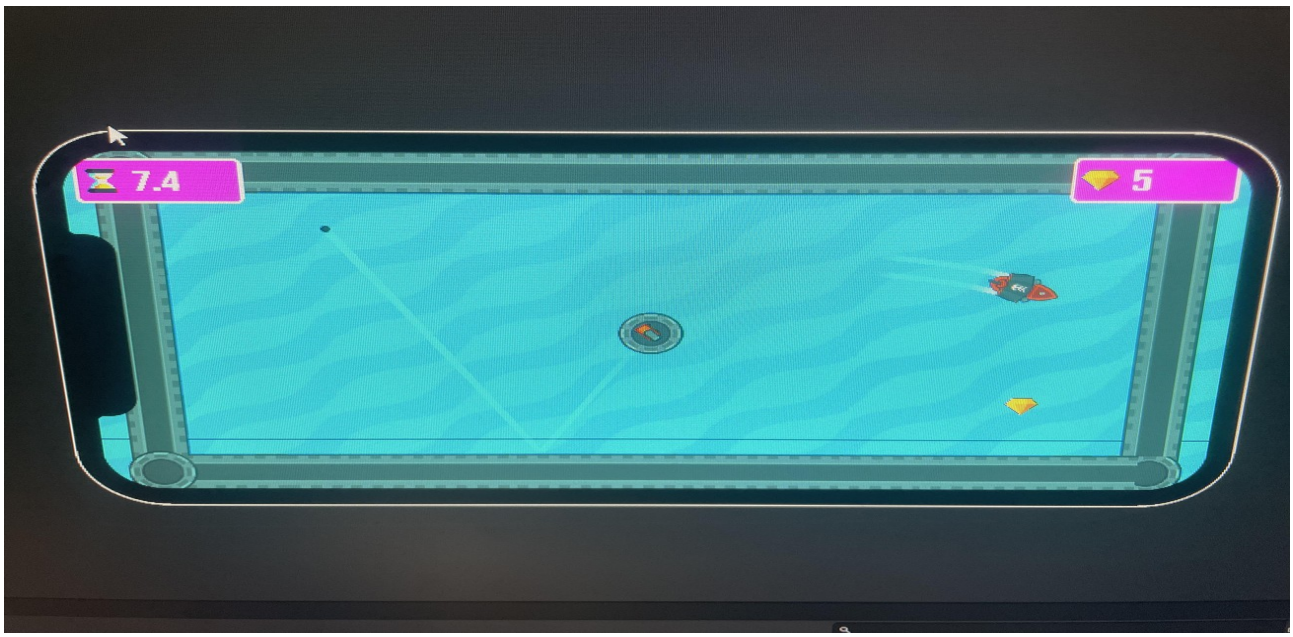

With these added, there will be 4 powerups and 4 downgrades total.

Photos:

Walls not to the edge of screen (iPhone 12 simulator)

Make the walls thinner (explanation above)
