

Some pirate ship ideas. The ship needs to not be round, but also not too rectangular. Similar to the video of gameplay I sent you currently. It needs to not be too rectangular basically for gameplay to be better. Only negative is it looks a little dark compared to the images below.Note that as shown in the video, the view of the ship is top-down.

Cartoon style cannon. Located on a centre fort island in the middle of the map. Firing the cannonballs that players avoid. Constantly rotating so that cannonballs are fired out at random angles and locations.

Ignore this, this was a previous photo to show another person the powerups. Powerups/downgrades. Compass design to keep on theme. However replace middle with icon relevant to what the powerup/downgrade does. E.g. speed up ship = Green double up arrow. double points for x seconds = green 2x text etc. (Perhaps the gold ring at the top could be green for upgrades and red for downgrades)

I like the colours and brightness in this photo.

Ignore the text but the actual background photo, I like the colours and brightness and the ship looks good, very piratey with all the skull and crossbones on the sails.

Again, ship and landscape look good, bright and engaging. Very piratey.
